

Fork-King Modification for Smaller bikes

If you are unable to position the Fork-King between your front tyre and underside of mudguard due to the height then you are able to cut it to length.

1. Measure from your front tyre to under the mud guard (where the fork-king will be positioned).
2. Determine below which category your measurement falls into.
3. Using a hacksaw or appropriate cutting device, cut the outer shaft (grey) on the lower side of the ring of the corresponding number (**please ensure that the inner threaded shaft is not inserted when cutting**). See Figure 1 Measurements (shortest to longest length the fork support will go to):

240mm—350mm	Full Size
205mm—300mm	⑤
170mm—250mm	④
135mm—190mm	③
100mm—135mm	②

4. Once you have cut the outer shaft (grey) you will then need to cut the below measurement from the top of the inner shaft (blue). See Figure 2.

35mm	⑤
70mm	④
105mm	③
140mm	②

Disclaimer: please ensure safety precautions are taken when using cutting devices. We take no responsibility for Fork-Kings which are incorrectly altered or incorrectly positioned. We take no responsibility for any injury or property damage sustained directly or indirectly from the modification to or use of for a Fork-King fork support.
